## Installation

### 1 Release the Inner Slide-Rails

1. For each rack-rail assembly, pull the slide-rail out to its full extended position.
2. Pull the white release tab on the inside of the inner slide-rail to remove it from the assembly.

3. Push the lever on the middle rails to retract them back into the rail assemblies.

### 2 Attach the Inner Slide-Rails to the Switch

1. Position each inner slide-rail on the side of the switch so that it aligns with the six mounting stand-offs.
2. Place each rail onto the mounting stand-offs and then slide it back until it clicks in place and is secured.

3. Use the M4 screws to provide additional security for the inner rail attachment to the switch. Tighten the screws to a torque of 15-20 Kgf-cm.

### 3 Mount the Slide-Rail Assemblies in the Rack

1. Replace the rack hole pins on the rail assemblies for “round-hole” rack posts. Tighten the pins to a torque of 20-25 Kgf-cm. (Rack square hole pins are pre-installed.)

2. For each rack-rail assembly, attach the rear part of the rails to the rear rack posts.
3. Extend the front part of each rack-rail assembly until it fits into the front rack post.

4. Secure each rail assembly to the rear post using the included M5 rack screws. Tighten the screws to a torque of 20-25 Kgf-cm.
